Spring Boot

Chandrima Das

Senior Java Developer with a focus on Spring Boot and AWS
India

Summary

I currently work as a Lead Software Developer building scalable backend systems and cloud-native microservices for high-performance data platforms. My work focuses on designing distributed architectures, improving system scalability, and implementing event-driven data pipelines that support large-scale data processing and analytics.

With over 10 years of experience in backend engineering, I specialize in Java, Spring Boot, and microservices architectures. My technical background includes working with cloud infrastructure on AWS, containerized environments using Docker and Kubernetes, and real-time streaming technologies such as Kafka. I also have strong experience with distributed data platforms, observability tools, and CI/CD pipelines that enable reliable and automated software delivery.

I am known for collaborating effectively across teams, delivering high-quality solutions on time, and continuously improving system performance and reliability. As a quick learner and proactive problem solver, I look forward to contributing to complex backend systems and building scalable cloud-native platforms.

Experience

Salesforce

4 years 3 months

Lead Member of Technical Staff

August 2024 - Present (2 years 1 month)
